

FACT OF THE DAY WIDGET

This widget allows any web site to embed in their content this Fact of the Day. Each day the fact will be different, and it will be automatically updated at midnight Eastern Time.

To embed this content in your web site, it is sufficient to copy the following line of code in the spot you want the content to appear.

```
<script type="text/javascript" src="http://healthyamericans.org/scripts/widget.php?style=1"></script>
```

This will insert the picture and the title as shown in the image above.

If you need to style the content to match you web site, then you can insert the following code

```
<script type="text/javascript" src="http://healthyamericans.org/scripts/widget.php"></script>
```

And you will get the “plain” version of the block with no styles attached to it. You can then use your main stylesheet to change the behavior of the content you obtained.

The result will be the following, and you can change the style by using the predefined classes, as shown below in bold, in the code.

```
<div id="factoftheday">  
  <div class="title-fact">FACT OF THE DAY</div>  
  <div class="fact-container">  
      
  </div>  
</div>
```
